

# Agriculture and Farms in the Lower Forty Eight States: Compairison of the 2007 and 2012 Census Of Agriculture

The Census of Agriculture from 2007 to 2012 shows a diverging landscape of farms. 2007 marked the year when The Great Recession in the United States started to form and 2012 shows a recovering from this crisis. However, while many farms grew in size from this time period, there is also a trend towards states also losing the number of working farms. Global Climate Change continues to threaten farming practices and there is a possibility of another recession in oncoming years.
